

Qualification Programme
Module 5 – Information Management
Report on Candidates' Performance
(December 2024 Session)

(The main purpose of the following report is to summarise candidates' common weaknesses and make recommendations to help future candidates improve their performance in the examination.)

This paper consisted of 45 multiple-choice questions. Candidates had one hour and forty-five minutes to complete the paper. The questions of this paper related broadly to the following Principal Learning Outcomes :

- (a) Analyse the role of e-Commerce;
- (b) Analyse the risks and security of information management;
- (c) Categorise the nature and account for the value of information systems;
- (d) Describe and apply corporate information systems;
- (e) Analyse systems development process; and
- (f) Use information technology applications.

The multiple-choice questions in this paper were divided into two broad categories, which were worth 1 to 2 marks each:

- Knowledge based questions; and
- Application based questions.

General Comments

The average marks (in percentage) scored by candidates for questions of the topic areas are as follows:

(a) Analyse the role of e-Commerce	69.7%
(b) Analyse the risks and security of information management	45.6%
(c) Categorise the nature and account for the value of information systems	69.6%
(d) Describe and apply corporate information systems	52.3%
(e) Analyse systems development process	48.6%
(f) Use information technology applications	71.5%

The average marks (in percentage) scored by candidates for the two broad categories of questions are as follows:

• Knowledge based questions	59.7%
• Application based questions	58.5%

In general, the candidates' performance in this session was satisfactory. They exhibited competence in analysing the role of e-Commerce, categorising the nature and accounting for the value of information systems, describing and applying corporate information systems, and using information technology applications. However, their proficiency in analysing the risks and security of information management, and analysing systems development process was relatively weaker.

Specific Comments

In this session, candidates demonstrated weakest performance in questions of topics below:

- Demonstrate the opportunities and threats to entity information system, including:
 - Capabilities in data treatment and analysis
 - Data integrity
 - Systems security
 - Cyber security
 - Access restriction
 - Business continuity
- Apply the concept of 'Big Data' and analyse how this trend affects the operations, such as decision-making process

Additionally, candidates encountered difficulties with the specialised topics of:

- Solving the behavioural issues of implementing information systems in entities
- Describing and applying the basic infrastructure required to support corporate information systems.

It appears that candidates may not have sufficient preparation on the captioned topics.

Moreover, candidates are reminded to choose the best one answer for each multiple-choice question. No marks are given if multiple (more than one) choices are selected as the answer for a question, even if one of the selected choices is the correct answer.
